

PrintProfit — Pro Pricing Spreadsheet

v2.0 · 18 Aug 2026 · USD edition (\$) — the same download includes USD, GBP and EUR files

What this does

Prices your 3D prints so you actually keep the profit you think you're making — after filament, power, machine wear, YOUR labour, failed prints, packaging, and marketplace fees. Most sellers price on filament alone and quietly lose money.

How to use it (4 steps)

1. 'Settings' — set your machine, electricity rate, labour rate and channel presets once. Green cells are inputs.
2. 'Pricing' — one row per product. Only Product, Grams and Print hours are required; pick the Channel from the dropdown; leave Fail % or Margin % blank to use your defaults; set a filament price per kg only for products that use a different spool.
3. 'Monthly P&L' — type units sold this month. Every product on Pricing is already listed.
4. 'Dashboard' — average margin, weakest and strongest products, this month's take-home, and a profit chart. 'Quote' — pick a product and a quantity (plus design time if any) for a customer-facing total.

The one idea that makes this worth it

Suggested price is solved backwards so your target margin is what's left AFTER fees:

$$\text{price} = (\text{true cost} + \text{fixed fee}) / (1 - \text{margin\%} - \text{marketplace\%} - \text{payment\%})$$

Adding '50% markup' is not a 50% margin once Etsy takes its cut. This sheet does it right.

Guard rails (so it stays right)

- Percent cells only accept percentages — type 8%, not 8. (An early version let a bare 8 through as eight hundred percent. Never again.)
- Formula cells are locked against accidental edits. To change a formula: Review → Unprotect Sheet. There is no password.
- Margins colour themselves: red under 20%, amber under your target, green at or above it.
- Fee presets are dated. Fee schedules change — check your channel's fee page before trusting a price.
- The Dashboard uses MINIFS/MAXIFS: Excel 2019 or 365, Google Sheets and LibreOffice all have them; Excel 2016 shows #NAME? there only.

Honest note

These are estimates to help you price with your eyes open — not a promise of sales or income. Costs vary (supports, shipping, returns, taxes). Treat suggested prices as a floor, not a guarantee.

Changelog

v2.0 (18 Aug 2026) — channel dropdown with fee lookup; per-product filament price; Fail % and Margin % fall back to your defaults; P&L covers all 40 products (was 3); new Dashboard and Quote tabs; percent validation; locked formulas; margin colourina: USD/GBP/EUR editions.

v1.1 (18 Aug 2026) — fixed seed rows that showed an eight-hundred-percent failure rate; Etsy preset aligned with the calculator.

v1.0 (1 Aug 2026) — first release.

Settings & Presets

Set these once. The Pricing tab reads them as defaults. Currency: US dollar (\$).

Default spool price (\$)	\$22.00
Default spool weight (g)	1000
Default printer power draw (W)	120
Electricity rate (\$/kWh)	\$0.17
Printer + upgrades cost (\$)	\$300.00
Printer expected life (print hours)	4000
Your labour rate (\$/hour)	\$18.00
Default failure / reprint rate (%)	8.0%
Default packaging per item (\$)	\$0.75
Default target profit margin (%)	50.0%
Design / CAD rate for quotes (\$/hour)	\$35.00

Channel presets (Pricing tab picks from this list)

Channel	Fee %	Flat \$	Pay %
Etsy (US)	6.5%	\$0.45	3.0%
Etsy + Offsite Ads (US)	21.5%	\$0.45	3.0%
eBay (US)	13.3%	\$0.30	0.0%
Own site / Stripe (US)	0.0%	\$0.30	2.9%
Local / cash	0.0%	\$0.00	0.0%
Custom (edit me)	0.0%	\$0.00	0.0%

*US rates, Aug 2026. Etsy = 6.5% transaction + 3% + \$0.45 (\$0.25 processing fee)
Fee schedules change — check your channel's fee page before trusting a price*

Monthly Profit & Loss

Month:

August 2026

Type units sold this month in the green column. Every product on the Pricing tab is listed here automatically.

Product	Units sold	Price each	Cost each	Revenue	Fees	Total cost	Profit
Articulated dragon	0	\$21.48	\$8.25	\$0.00	\$0.00	\$0.00	\$0.00
Desk phone stand	0	\$11.46	\$4.19	\$0.00	\$0.00	\$0.00	\$0.00
Cable clips (x10)	0	\$15.60	\$5.09	\$0.00	\$0.00	\$0.00	\$0.00
TOTAL	0			\$0.00	\$0.00	\$0.00	\$0.00

Dashboard

Reads the Pricing and Monthly P&L tabs. Nothing to type here.

Catalogue

Products priced	3
Average margin (priced products)	51.7%
Your target margin	50.0%
Products below target margin	0
Weakest margin	50.0%
...which product	Articulated dragon
Strongest margin	55.0%
...which product	Cable clips (x10)

This month (from Monthly P&L)

Month	August 2026
Units sold	0
Revenue	\$0.00
Marketplace & payment fees	\$0.00
Cost of goods (incl. your labour)	\$0.00
Profit (take-home)	\$0.00
Overall margin this month	0.0%
Best seller (units)	Articulated dragon

First 15 products on the P&L. Blank rows plot as zero.

Quote a job

Pick a product, set the quantity, add design time if any. Green cells are yours; the customer-facing block builds itself.

Inputs

Customer name

Product (from Pricing)

Quantity

Design / CAD hours (optional)

Design rate (\$/hour)

Other extras, e.g. rush or delivery (\$)

Quote valid for (days)

Articulated dragon
